Disease Prevalence

GP's keep a record of people with specific diseases such as diabetes, heart disease (CHD), respiratory disease (COPD) and depression as part of a performance movement and payment system. 2017/18 data from these registers have been used to calculate disease prevalence. It is important to note that these figures may be under estimates of the prevalence of disease due to people not presenting to their GP's, not being diagnosed and not being recorded.

Coronary Heart Disease (CHD)

CHD is caused by a build-up of fatty deposits on the walls of the arteries around the heart (coronary arteries). Risk is significantly increased if you smoke, have high blood pressure (hypertension), have high blood cholesterol level, do not take regular exercise, or have diabetes, or are overweight/obese.

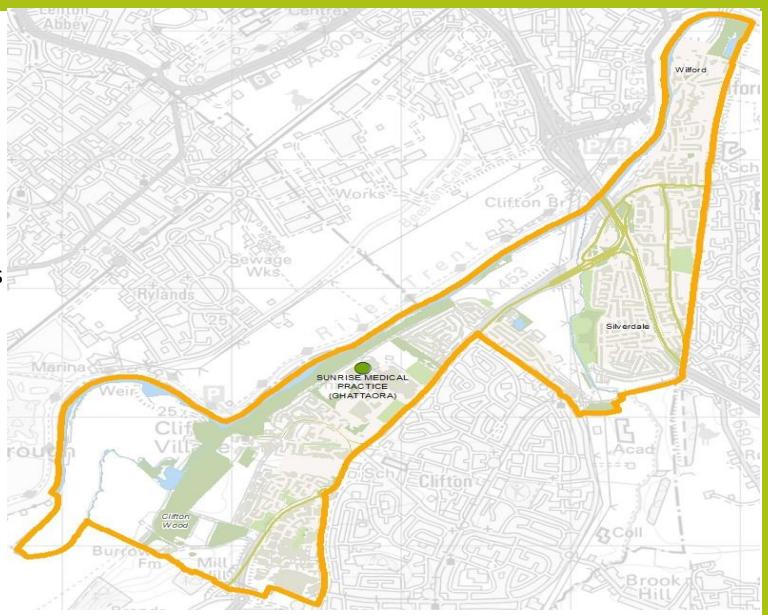

None of the GP practices within Clifton West area have a significantly higher CHD prevalence than the England average.

Chronic Obstructive Pulmonary Disease (COPD)

COPD is the name for a collection of lung diseases including chronic bronchitis, emphysema, and chronic obstructive airways disease. People with COPD have difficulties breathing, primarily due to the narrowing of their airways, this is called airflow obstruction. Smoking is the main cause of COPD. At least four out of five people who develop the disease are or have been smokers.

None of the GP practices within Clifton West area have a significantly higher COPD prevalence than the England average.

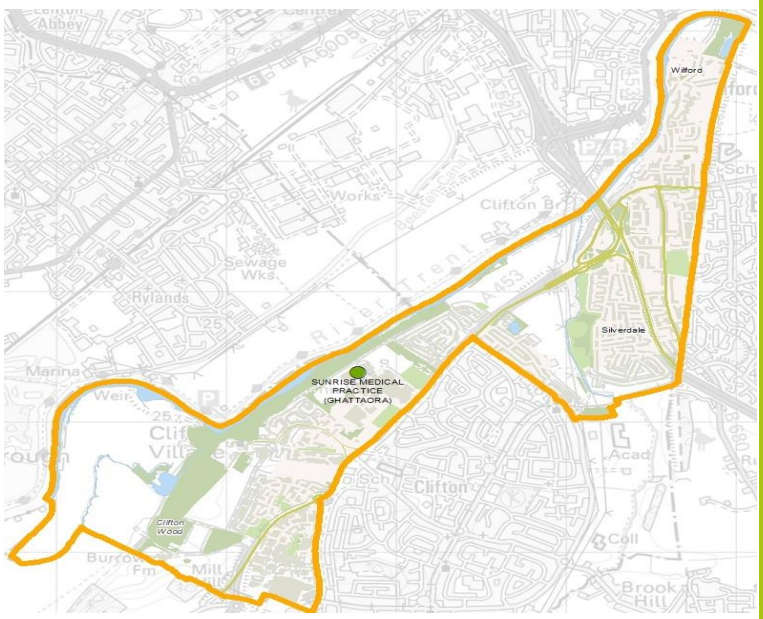

Diabetes

Type 2 diabetes (the most common type) and obesity are clearly connected- being overweight or obese has been estimated to account for 65% -80% of new cases of type 2 diabetes. Diabetes is linked to many health complications such as heart disease, eye problems, kidney disease and problems with circulation, so it is important that it is diagnosed early and managed.

Clifton West has a lower percentage of overweight and obese patients registered with a GP practice compared to the England average and so would be expected to have a lower prevalence of diabetes.

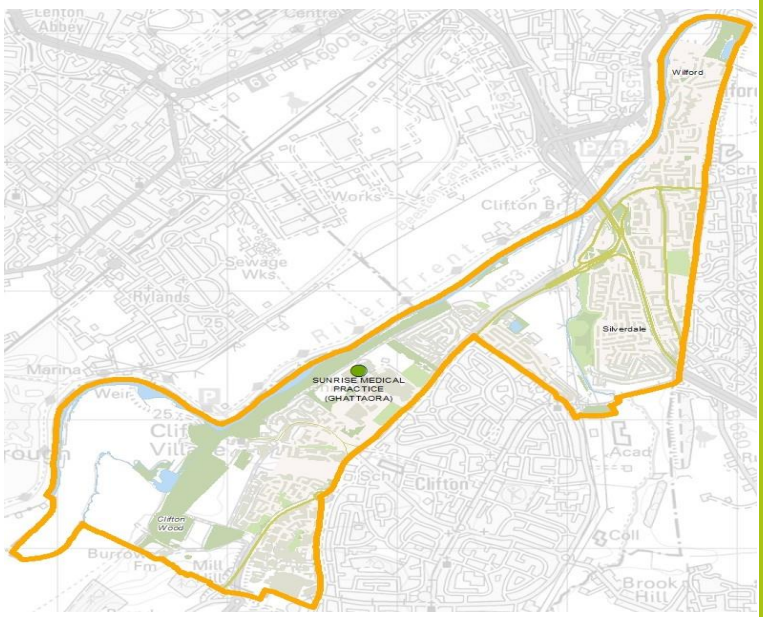

None of the GP practices within Clifton West area have a significantly higher diabetes prevalence than the England average.

Severe Mental Illness

The register includes all patients with a diagnosis of schizophrenia, bipolar affective disorder and other psychoses. Mental illness can result in high levels of disability, loss of life for patients, their families and carers.

None of the GP practices within Clifton West area have a significantly higher recorded prevalence than the England average.

Nottingham City Council

NHS Health Checks

NHS Health Check is a free health check-up for adults aged between 40 and 74 years in England. It is an assessment and management programme designed to spot the early signs of heart disease, type 2 diabetes, kidney disease, stroke and dementia. Identifying early signs of disease is key to reducing risk and improving opportunity for early intervention.

Eligible Population

194 of Clifton West residents aged between 40 and 74 years were eligible for an NHS health check over the 5 year period (2014/15 to 2018/19).

NHS Health Checks Offered

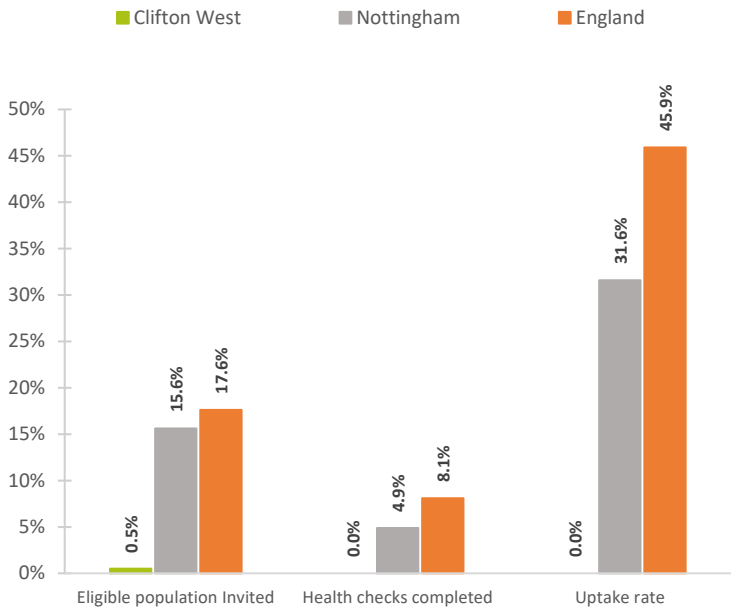

0.5% (**1**) of Clifton West's eligible population were offered an NHS Health Check, **lowest** in the city and **lower** than the England average of **17.6%**

NHS Health Checks Taken Up

0.0% of those invited within Clifton West area, took up an NHS Health Check. This is **lower** than both the City and England average (**31.6%** and **45.9%** respectively)**.**

NHS Health Checks Received

Compared to the City average of **4.9%** and England average of **8.1%**, a **lower** proportion (**0%**) of Clifton West's eligible population received an NHS Health check, **lowest** in the city

Nottingham Citizens' Survey 2014-2016 Health Questions

The Nottingham Citizen's Survey gathers citizens' perceptions on a variety of subjects including health. Around 2,000 citizens take part in the survey each year. The chart below shows health results from the combined 2014-2016 surveys and how Clifton West compares with the rest of the City wards.

Key:

- Significantly lower than the City average
- Not significantly different from the City average
- Significantly higher than the City average

	Indicator	Ward Value	City Avg	City Worst Value	City Ward Range	City Best Value
1	Average mental wellbeing score of residents(WEMWEBS)	54.3	52.6	50.7		54.4
2	% of residents who smoke	23.7	24.1	38.5		9.1
3	% of residents who are binge drinkers	16.2	15.9	34.5		8.4
4	% of residents who are high/increased risk drinkers	8.8	10.3	20.9		3.5

Citizen survey results indicate that Clifton West has a lower percentage of residents who smoke but this is not significantly different to the City average.

Each ward indicator is shown as a circle. The average value for Nottingham's wards are shown by the black line, which is always at the centre of the chart. If the Circle is to the right of the black line then the ward's value is higher, if it is to the left of the black line the value is lower.

The range of results for all wards within Nottingham City are shown as a grey bar. A yellow circle means that the Ward's value is significantly higher that the City's average, a purple circle indicates that their value is significantly lower. A white circle indicates that even though a value may be higher/lower than the City's average; it is not statistically significantly.
