Disease Prevalence

GP's keep a record of people with specific diseases such as diabetes, heart disease (CHD), respiratory disease (COPD) and depression as part of a performance movement and payment system. 2017/18 data from these registers have been used to calculate disease prevalence. It is important to note that these figures may be under estimates of the prevalence of disease due to people not presenting to their GP's, not being diagnosed and not being recorded.

Coronary Heart Disease (CHD)

CHD is caused by a build-up of fatty deposits on the walls of the arteries around the heart (coronary arteries). Risk is significantly increased if you smoke, have high blood pressure (hypertension), have high blood cholesterol level, do not take regular exercise, or have diabetes, or are overweight/obese.

Both GP practices within Aspley area have significantly **higher** CHD prevalence than the England average.

Chronic Obstructive Pulmonary Disease (COPD)

COPD is the name for a collection of lung diseases including chronic bronchitis, emphysema, and chronic obstructive airways disease. People with COPD have difficulties breathing, primarily due to the narrowing of their airways, this is called airflow obstruction. Smoking is the main cause of COPD. At least four out of five people who develop the disease are or have been smokers.

1 of **2** GP practices within Aspley area have significantly **higher** COPD prevalence than the England average.

Nottingham City Council

Diabetes

Type 2 diabetes (the most common type) and obesity are clearly connected- being overweight or obese has been estimated to account for 65% -80% of new cases of type 2 diabetes. Diabetes is linked to many health complications such as heart disease, eye problems, kidney disease and problems with circulation, so it is important that it is diagnosed early and managed.

Aspley has a lower percentage of overweight and obese patients registered with a GP practice compared to the England average and so would be expected to have a lower prevalence of diabetes.

1 of **2** GP practices within Aspley area have significantly **higher** diabetes prevalence than the England average.

Severe Mental Illness

The register includes all patients with a diagnosis of schizophrenia, bipolar affective disorder and other psychoses. Mental illness can result in high levels of disability, loss of life for patients, their families and carers.

None of the GP practices within Aspley area have a significantly higher recorded prevalence than the England average.

NHS Health Checks

NHS Health Check is a free health check-up for adults aged between 40 and 74 years in England. It is an assessment and management programme designed to spot the early signs of heart disease, type 2 diabetes, kidney disease, stroke and dementia. Identifying early signs of disease is key to reducing risk and improving opportunity for early intervention.

Eligible Population

2,852 of Aspley residents aged between 40 and 74 years were eligible for an NHS health check over the 5 year period (2014/15 to 2018/19).

NHS Health Checks Offered

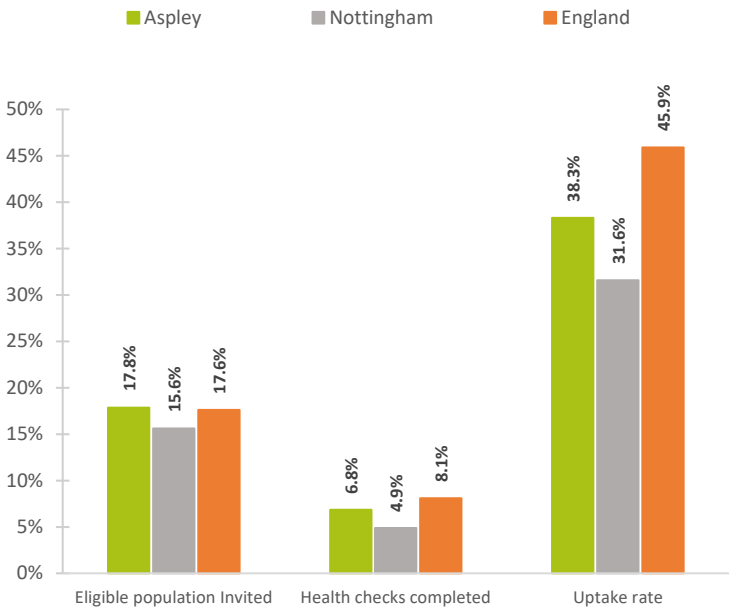

17.8% (**509**) of Aspley's eligible population were offered an NHS Health Check, **higher** than both the City and England average of **15.6%** and **17.6%** respectively.

NHS Health Checks Taken Up

38.3% of those invited within Aspley area, took up an NHS Health Check. This is **higher** than the City average (**31.6%**) but **lower** than the England average (**45.9%**).

NHS Health Checks Received

A **higher** proportion (**6.8%**) of Aspley's eligible population received an NHS Health Check compared to the City average (**4.9%**) but **lower** compared to the England average (**8.1%**).

Physical Activity

Active lives survey measures the activity level of people aged 16 and above across England. Activities includes walking, cycling, dance, fitness and sporting activities but excludes gardening. Depending on the number of minutes of physical activity, people are described as being: Active(doing at least 150 minutes a week); Fairly active (doing at least 30 - 149 minutes a week); Inactive (doing less than 30 minutes a week).

Based on the 2018/19 survey, **55.7%** of Aspley residents aged 16 and above are physically active, **lower** than both the City (**63.2%**) and England average (**63.2%**).

10.7% of adults in this ward partake in physical activities for at least 30 to 149 minutes per week, **lower** than both the City (**11.9%**) and England average (**12.0%**).

A **higher** percentage (**33.5%**) of adults aged 16 and above within this ward are physically inactive, compared to both the City (**25.0%**) and the England average (**24.8%**).

Nottingham Citizens' Survey 2014-2016 Health Questions

The Nottingham Citizen's Survey gathers citizens' perceptions on a variety of subjects including health. Around 2,000 citizens take part in the survey each year. The chart below shows health results from the combined 2014-2016 surveys and how Aspley compares with the rest of the City wards.

Key:

- Significantly lower than the City average
- Not significantly different from the City average
- Significantly higher than the City average

	Indicator	Ward Value	City Avg	City Worst Value	City Ward Range	City Best Value
1	Average mental wellbeing score of residents(WEMWEBS)	50.7	52.6	50.7		54.4
2	% of residents who smoke	38.5	24.1	38.5		9.1
3	% of residents who are binge drinkers	16.2	15.9	34.5		8.4
4	% of residents who are high/increased risk drinkers	12.2	10.3	20.9		3.5

Citizen survey results indicate that Aspley has a significantly higher percentage of residents who smoke compared to the City average. Whilst it does have a higher percentage of binge drinkers and drinkers at increased/risk, the figure is not significantly different from the City average.

Each ward indicator is shown as a circle. The average value for Nottingham's wards are shown by the black line, which is always at the centre of the chart. If the Circle is to the right of the black line then the ward's value is higher, if it is to the left of the black line the value is lower.

The range of results for all wards within Nottingham City are shown as a grey bar. A yellow circle means that the Ward's value is significantly higher that the City's average, a purple circle indicates that their value is significantly lower. A white circle indicates that even though a value may be higher/lower than the City's average; it is not statistically significantly.
