PRIMARY CARE NETWORKS

HEALTH AND CARE PROFILE

Version 1.8

Beeston Neighbourhood

Prepared by Nottinghamshire County Council and Nottingham City Council, Public Health Intelligence

Purpose of this profile

- These profiles are a detailed view covering the various aspects of the health, wellbeing and social care of the different Primary Care Networks (PCNs)
- They are intended to help inform the needs of the local population, to assist and support the planning of local services
- They will allow organisations and teams working in PCNs to develop tailored approaches to engagement and communications and understand issues unique to each population
- The intention is that they are conversation starters for local government, health and social services and the community

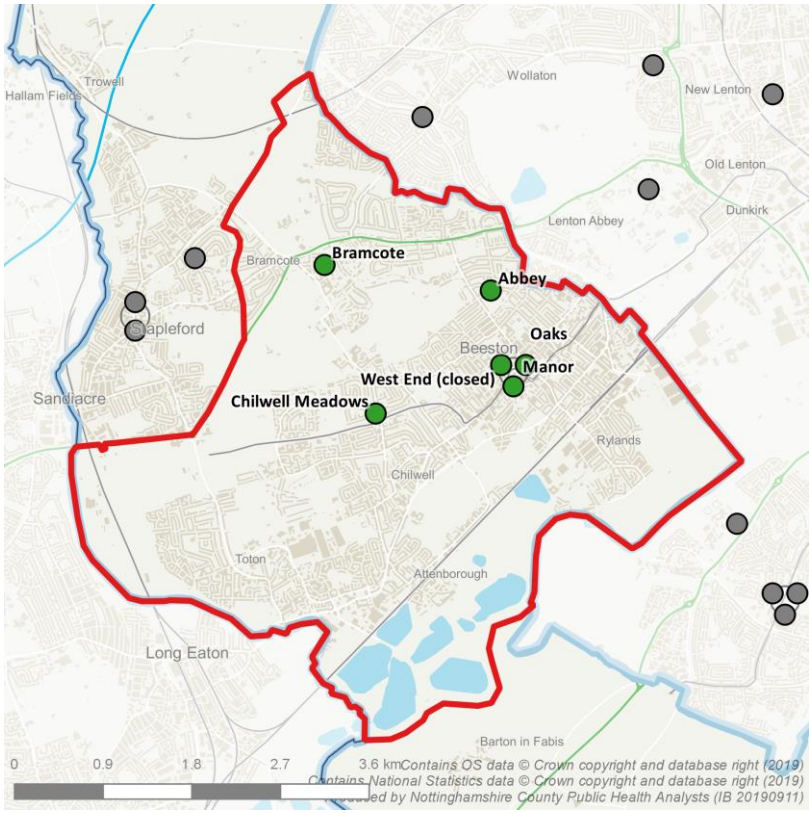

What does this profile reveal about this Neighbourhood

- This Neighbourhood is responsible for 13% of the registered patients in South Notts ICP and 45% of the registered population of Nottingham West PCN.
- The population structure is relatively young with a high proportion of young adults; it is ethnically diverse and relatively affluent.
- Life Expectancy and Healthy Life Expectancy compare well with national figures. On average, health may begin to decline around age 66; 2 years later than England.
- Prevalence of circulatory disease, asthma and cancer is higher than nationally but primary care (as measured by QOF) is at least as good as England and better in some disease areas.

Beeston Neighbourhood

Quick statistics for this Neighbourhood (NHD)

- There are a total of 48,039 patients registered with practices in this NHD; 45% of the ICP population. Of these 93% live within the nominal NHD boundary.
- 76% of the population resident within the NHD boundary are registered with its GP practices.
- Compared to the ICP as a whole, the NHD has a higher proportion of young adults (24-44 years) and fewer older adults. The proportion of elderly people is similar.
- 2% of the population provide 50 hours or more of unpaid care each week. This is slightly lower than the England average (2.4%).
- The NHD is more ethnically diverse than the ICP generally. BME groups form 10.4% of the resident population, compared to 6.7% in the ICP.
- Asian and mixed ethnic groups form the predominant BME groups in the area.
- 4.6% of people rate their health as 'bad' or 'very bad', slightly lower than the ICP and England values.
- The area is less deprived than the ICP, with under 3% of the population living in the most deprived fifth of areas in England.
- Over 65% of school children achieve five A* - C grade GCSEs; better than the than England average.
- A higher proportion of the population experience fuel poverty.
- Incidence of selected cancers is similar or better than compared to the England.
- All-age death rates for all causes and cancer are better or similar to England.
- However, deaths from stroke are higher than expected.
- The death rate among people aged under 75 is better than expected than England.

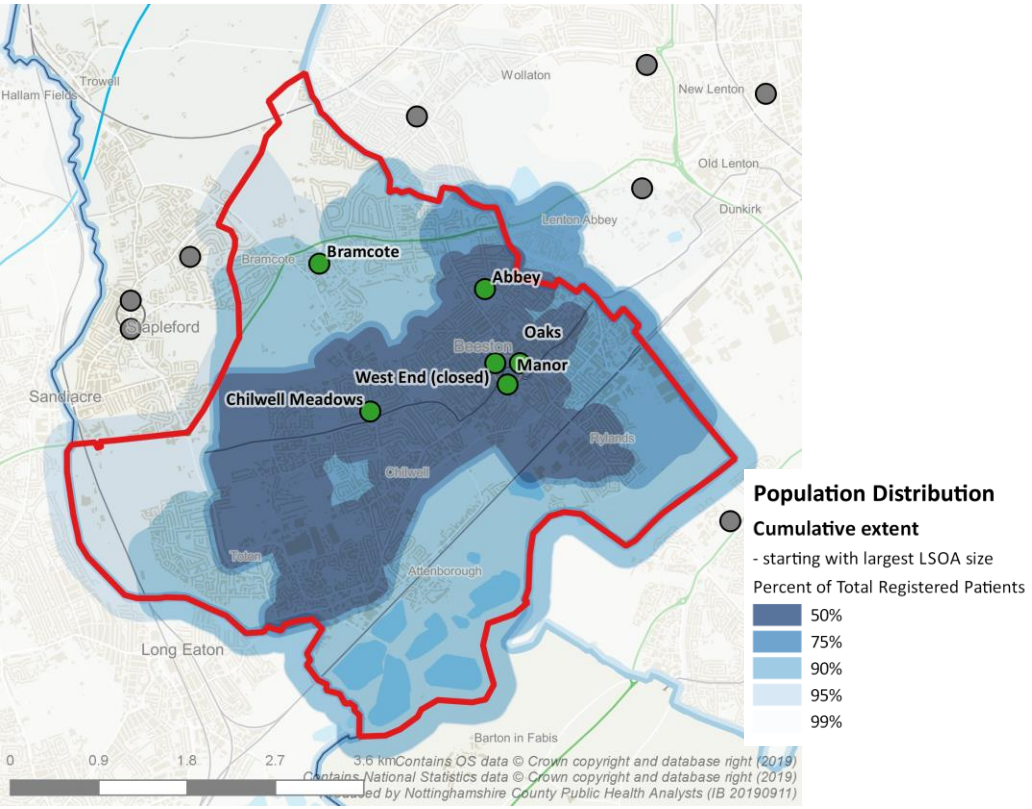

This NHD boundary covers the south of Broxtowe District, including Beeston, Chilwell and Bramcote.

- There are 5 GP practices in this NHD (shown in green), one having closed.

Beeston Neighbourhood

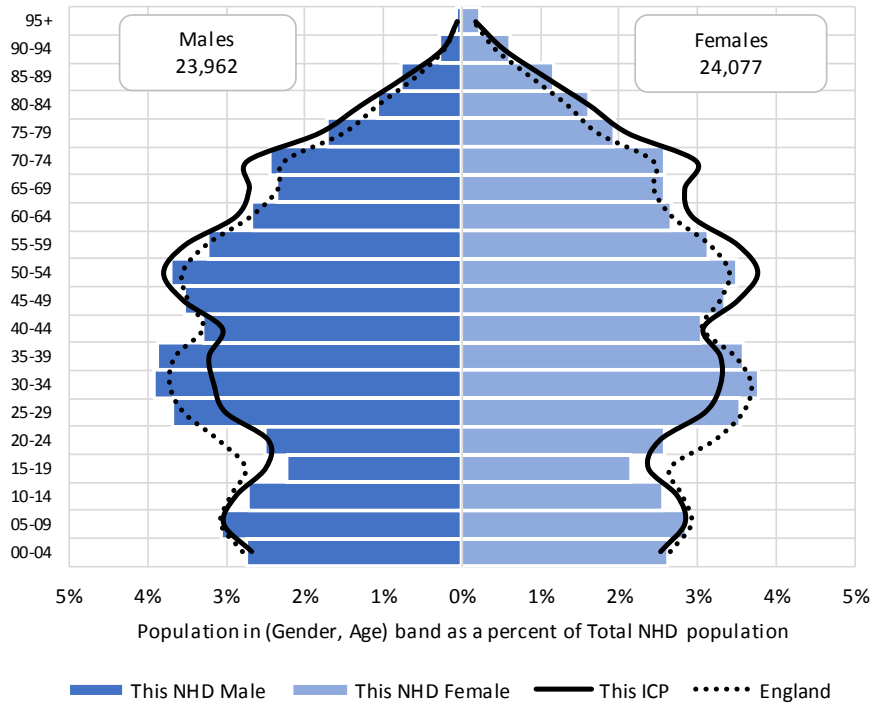

Patient population density

The nominal area for this NHD covers Beeston, Chilwell and Bramcote in Broxtowe District.

- There are 5 GP practices in this NHD.
- 93% of patients registered with the practices live within the boundary.
- 76% of people living within the boundary area are registered with NHD practices.

Patient population pyramid

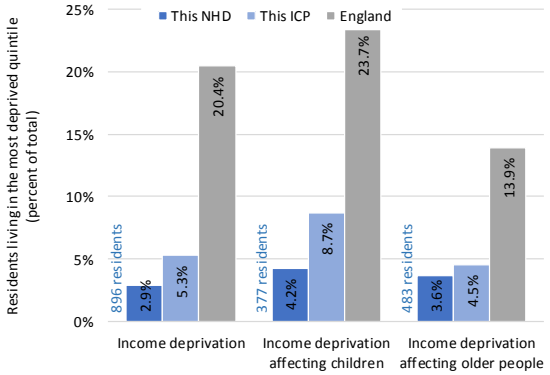

Source: NHS Digital 'Patients registered at GP practices' (April 2019 extract)

This chart shows the April 2019 GP registered population for the NHD, ICP and England.

- There are a total of 48,039 patients registered with the GP practices.
- Overall the population profile shows a much higher proportion of young adults than the ICP.
- The proportion of older adults is slightly lower than the ICP population.

Beeston Neighbourhood

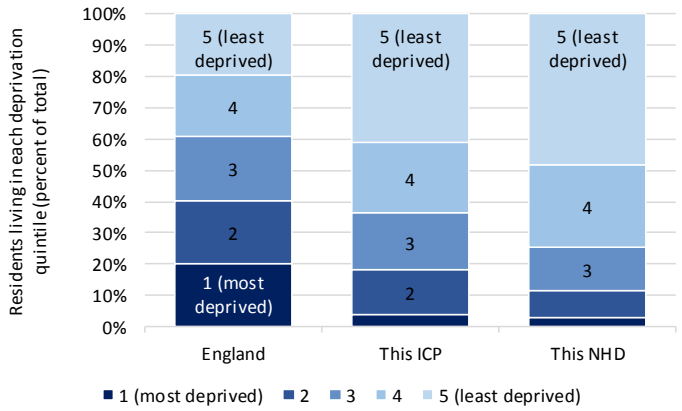

Deprivation (Income Domain)

Source: MHCLG Indices of Income Deprivation (2019) (including ONS Population Estimates 2015), ICP spatial boundary, locally agreed NHD spatial boundaries

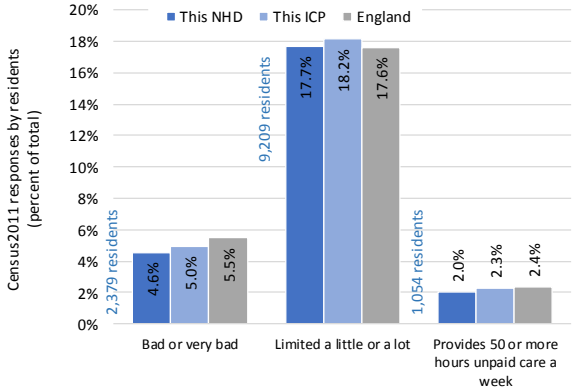

- 4.2% of children in this NHD are living in areas defined as the most deprived 20% in England.
- This is lower than for the ICP and England.

Deprivation (Index of Multiple Deprivation)

Source: MHCLG Index of Multiple Deprivation (IMD) (2019) (including ONS Population Estimates 2015), ICP spatial boundary, locally agreed NHD spatial boundaries

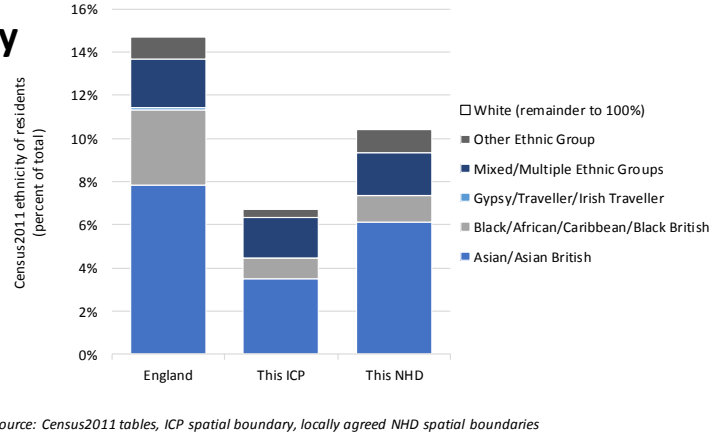

Self reported health and care

Source: Census2011 tables, ICP spatial boundary, locally agreed NHD spatial boundaries

- Compared to the ICP and England, similar proportions of this NHD population report that their health is bad or very bad, or that their daily activities are limited by health or disability.

Ethnicity

Source: Census2011 tables, ICP spatial boundary, locally agreed NHD spatial boundaries

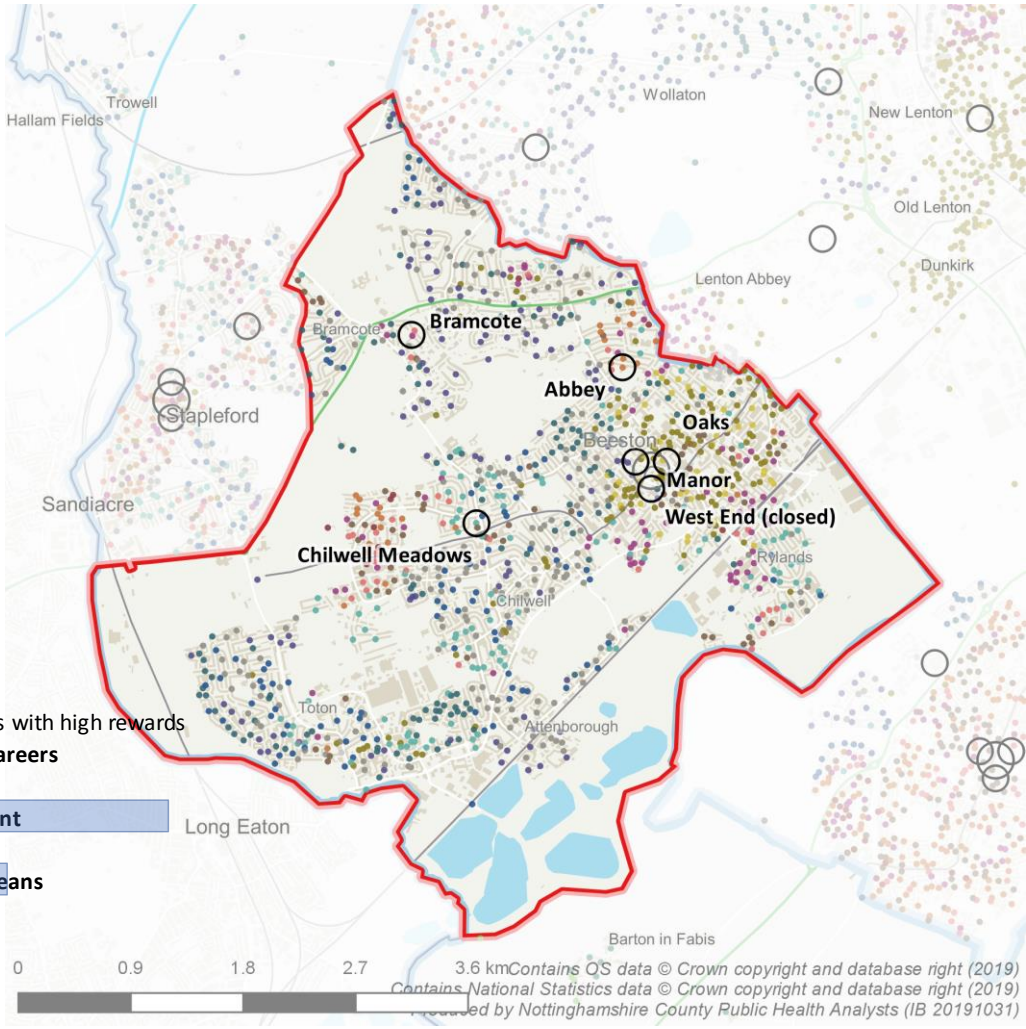

- 10.4% of the resident population is from a BME background.
- This is higher than across the ICP (6.7%).

Beeston Neighbourhood

Mosaic population groups

Mosaic groups are a way to segment the population into 15 groups based on their common characteristics

- The predominant groups are Group F, H and D making up 42% of the population. They comprise comfortable retirees and younger financially stable homemakers and families.
- Groups L,M,N, and O, with perhaps more limited resources and greater health needs make up 18% of the population.

Percent	Group Type Name	One Line Description
0.0%	A Country Living	Well-off owners in rural locations enjoying the benefits of country life
8.9%	B Prestige Positions	Established families in large detached homes living upmarket lifestyles
0.2%	C City Prosperity	High status city dwellers living in central locations and pursuing careers with high rewards
12.1%	**D Domestic Success**	**Thriving families who are busy bringing up children and following careers**
9.8%	E Suburban Stability	Mature suburban owners living settled lives in mid-range housing
16.7%	**F Senior Security**	**Elderly people with assets who are enjoying a comfortable retirement**
0.0%	G Rural Reality	Householders living in inexpensive homes in village communities
13.5%	**H Aspiring Homemakers**	**Younger households settling down in housing priced within their means**
4.0%	I Urban Cohesion	Residents of settled urban communities with a strong sense of identity
11.8%	**J Rental Hubs**	**Educated young people privately renting in urban neighbourhoods**
3.1%	K Modest Traditions	Mature homeowners of value homes enjoying stable lifestyles
7.8%	L Transient Renters	Single people privately renting low cost homes for the short term
3.3%	M Family Basics	Families with limited resources who have to budget to make ends meet
5.8%	N Vintage Value	Elderly people reliant on support to meet financial or practical needs
0.8%	O Municipal Challenge	Urban renters of social housing facing an array of challenges

Beeston Neighbourhood

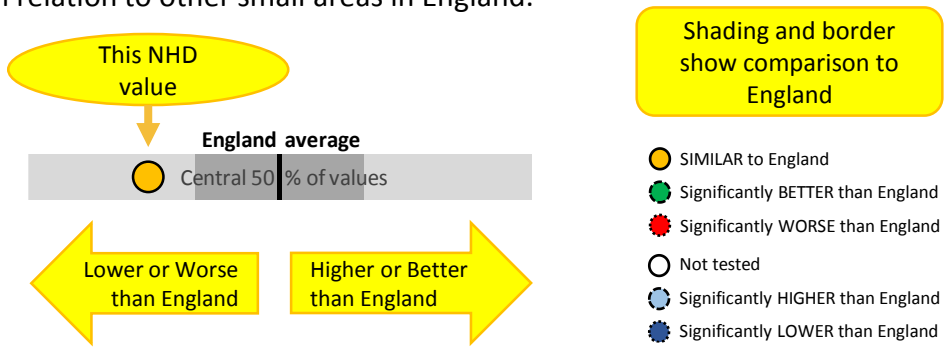

Public Health England Local Health Indicators

Local Health is a collection of health information to help understand the health and wider determinants of health of populations in small geographical areas.

Local Health contains indicators relate to Population and demographic factors, Wider determinants of health and Health outcomes and are split across four domains:

- Our Community
- Behavioural risk factor and child health
- Disease and poor health
- Life expectancy and causes of death

Values for NHDs are estimated using the small area data and are compared to the overall England value. The spine chart shows how these values vary in relation to other small areas in England.

These indicators are based on resident populations which should not differ greatly from the registered population unless the registered population has a wide spatial distribution.

Features to note for this NHD

- Life expectancy at birth for Females is higher than for Males
  - Life expectancy for Males in 2013-17 was 80.7 years
  - … and for Females was 83.9 years
- Females live in poor health for longer than Males
  - The gap between Life expectancy and Healthy life expectancy in 2009-13 was 14.7 years for Males
  - … and 17.4 years for Females.
- Generally, the population is moderately affluent with some pockets of deprivation and in reasonably good health; local health indicators are generally comparable to or better than England averages.
- Areas where this NHD fares worse than England include:
  - Fuel poverty
  - Back pain and severe back pain prevalence
  - Deaths from stroke (all ages)

Social care measures

These are local breakdowns of datasets relating to the Short and Long Term Support (SALT) submissions for the national collection. Two years of data are combined (2017/18 and 2018/19) and include cross-border City and County residents.

Measure 1: Adults (aged 18+) supported in long-term residential and nursing care at the year-end 31 March

1A: Younger adults (aged 18-64)	1B: Older adults (aged 65 and over)
90.4 per 100,000 residents (60 clients)	**2,122.9** per 100,000 residents (455 clients)
This rate is lower than England	This rate is higher than England
England: 122.9 per 100,000 residents	England: 1,478.7 per 100,000 residents

Measure 2: Adults (aged 18+) accessing long-term community support at the year-end 31 March

2A: Younger adults (aged 18-64)	2B: Older adults (aged 65 and over)
572.7 per 100,000 residents (380 clients)	**2,192.9** per 100,000 residents (470 clients)
This rate is similar to England	This rate is similar to England
England: 630.3 per 100,000 residents	England: 2,327.7 per 100,000 residents

Measure 3: Long-term support needs of adults (aged 18+) met by admission to residential and nursing care homes

Lower rates are considered better

3A: Younger adults (aged 18-64)	3B: Older adults (aged 65 and over)
15.1 per 100,000 residents (10 clients)	**886.5** per 100,000 residents (190 clients)
This rate is similar to England	This rate is worse than England
England: 13.9 per 100,000 residents	England: 582.8 per 100,000 residents

Measure 4: Proportion of older people (65 and over) who were still at home 91 days after discharge from hospital into reablement / rehabilitation services

Higher percentages are considered better

4: Older adults (aged 65 and over)
54.5 percent (30 clients)
This percentage is worse than England
England Value: 82.7 percent

Beeston Neighbourhood

Quality outcomes framework (QOF)

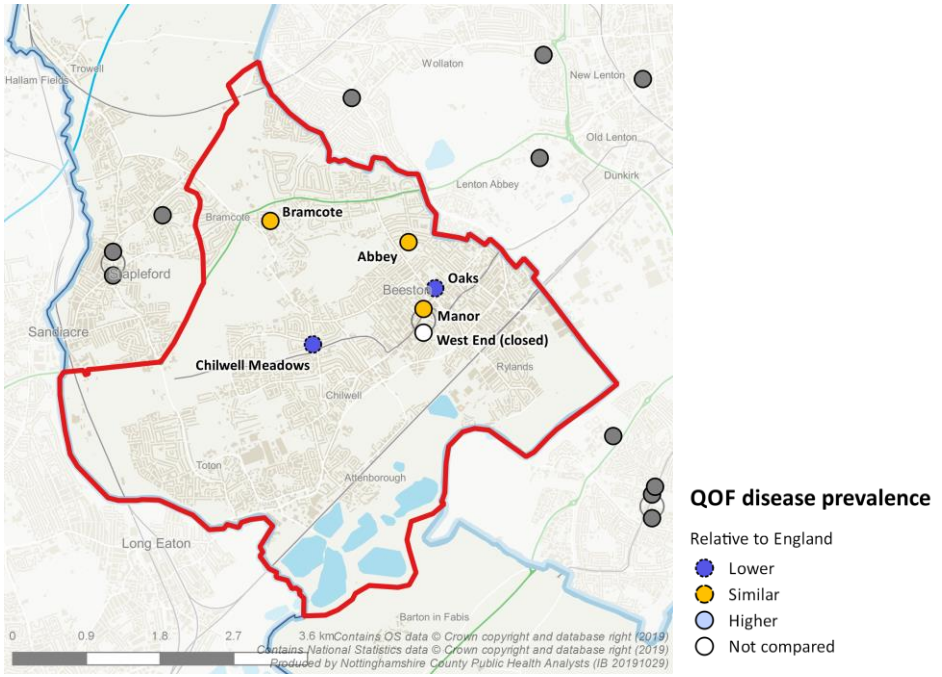

- The QOF is a performance, management and payment system for General Practices.

- GPs keep a record of people with specific diseases such as
  - chronic chest disease (COPD)
  - diabetes
  - heart disease (CHD)
  - mental health
  - dementia
  - atrial fibrillation
  - asthma
  - learning disability
  - osteoporosis
  - palliative care, and
  - smoking

- These registers are used to calculate recorded disease prevalence, which is compared to England in these profiles.

- The data in this profile is for the year 2018/19. The figures may be under estimates due to people not presenting to their GP, not being diagnosed or not being recorded.

COPD prevalence

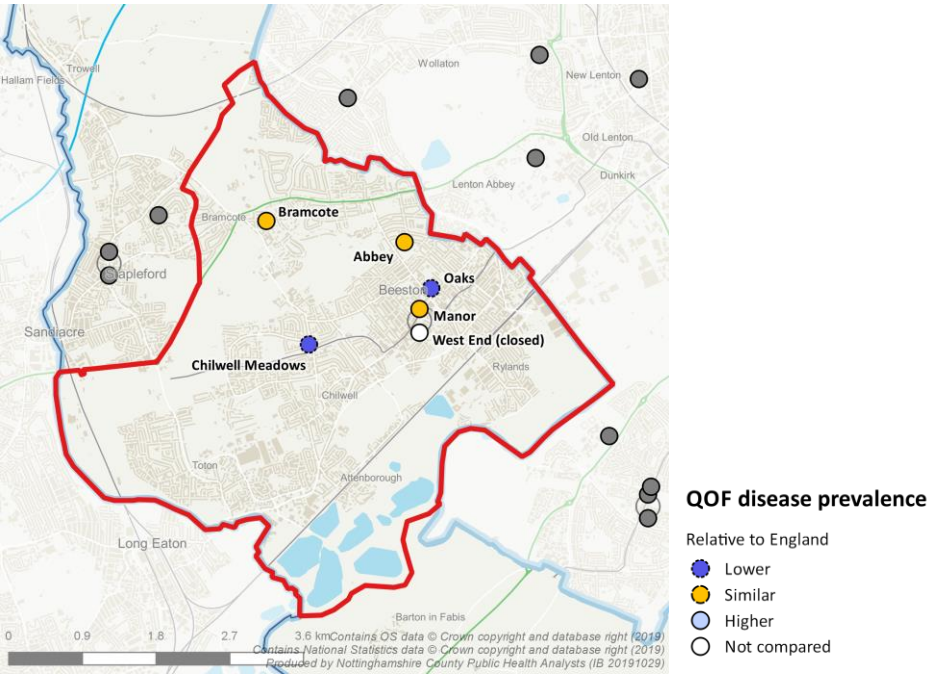

COPD is the name for a collection of chronic chest diseases. People with COPD have difficulties breathing due to a narrowing of their airways. Smoking is the main cause of COPD – more than 4 out of 5 people who develop the disease are, or have been smokers.

- The NHD population had a similar prevalence of COPD to England.
- 96.6% of patients had their diagnosis confirmed by post bronchodilator spirometry, similar to the England average of 96.3%.
- 82.9% of patients had received an influenza vaccination; similar to the England average of 78.4%.

Beeston Neighbourhood

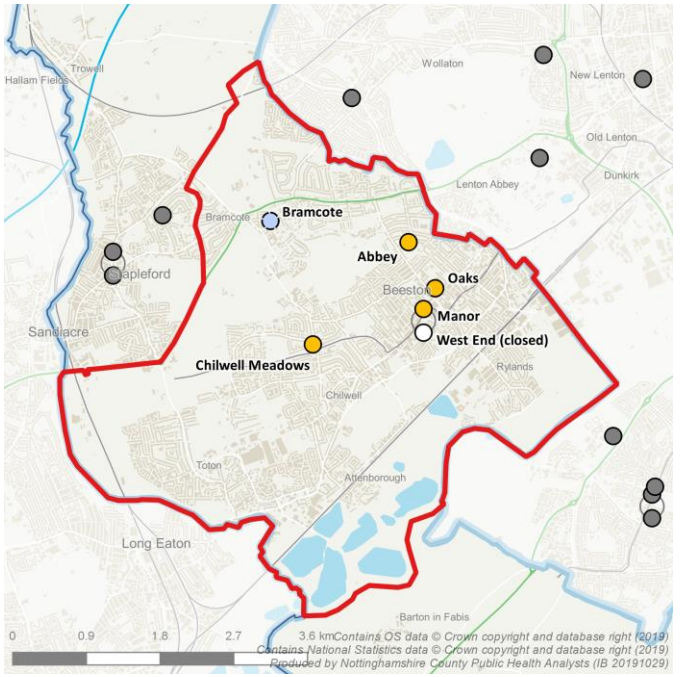

Diabetes prevalence

Type 2 diabetes is linked to many health complications such as heart disease, eye problems, kidney disease and problems with circulation. It is important that diabetes is diagnosed early and well managed.

- The NHD population had a lower prevalence of diabetes than the England population.
- 73.9% of patients had well controlled (HbA1c of 64mg or less) blood sugar, better than the England average.
- The uptake of influenza immunisation (82%) was better than England.
- However, referral to structured education was lower than England.

CHD prevalence

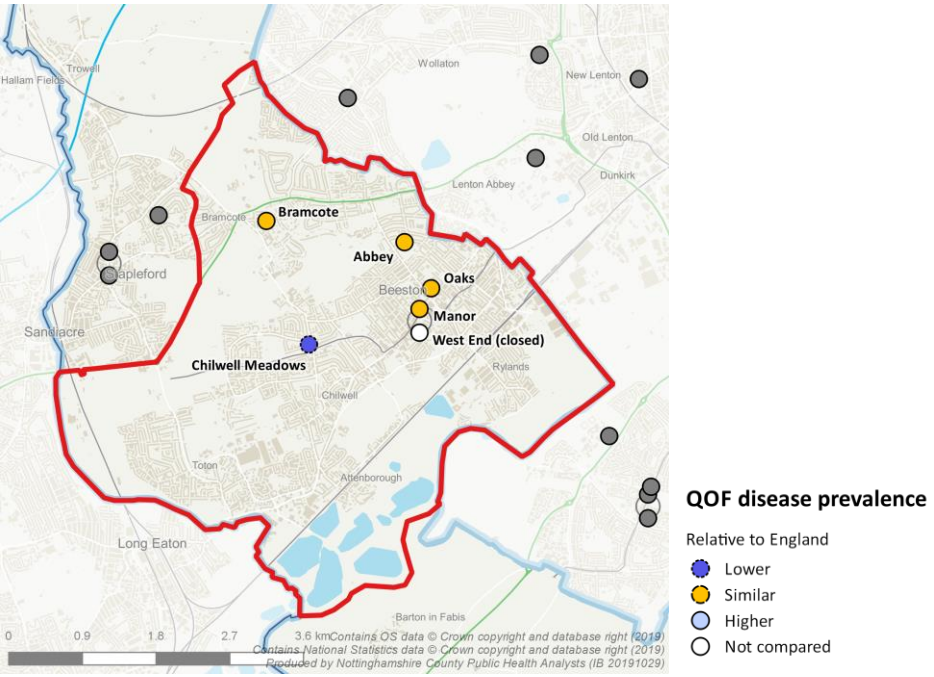

Coronary heart disease is caused by a build up of fatty deposits on the walls of the arteries around the heart (coronary arteries). Smoking, high blood pressure, lack of exercise, diabetes or being overweight or obese all increase the risk of CHD.

- The NHD population had a similar prevalence to the England population; 3.2% compared with 3.1%.
- 77.7% of CHD patients had well controlled blood pressure, similar to the England average (80.6%).
- 85.2% of CHD patients had taken aspirin or anti-clotting medication. This is better than the England average (79.6%).

Beeston Neighbourhood

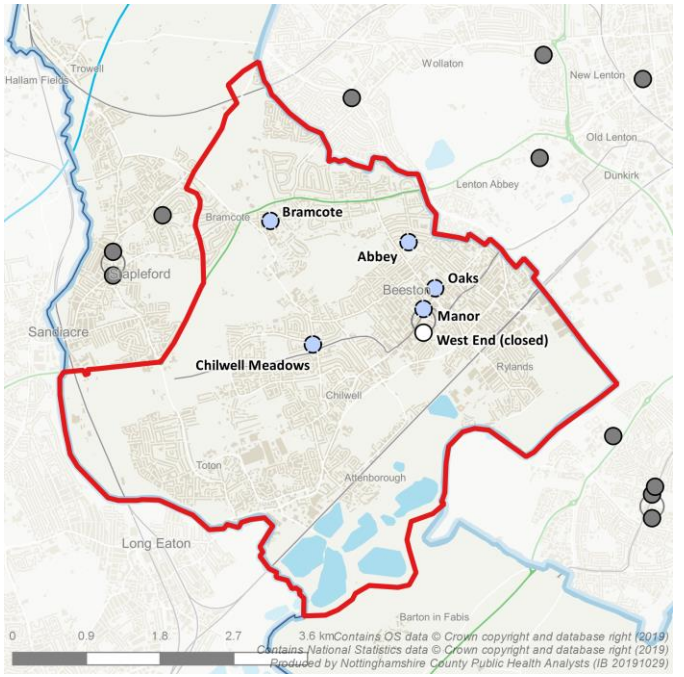

Mental health prevalence

This includes all patients with a diagnosis of schizophrenia, bipolar affective disorder or other psychoses. Mental illness can result in high levels of disability and a reduced quality of life for patients, families and carers.

- The NHD population had a lower prevalence than England; 0.9% compared to 1% for England.
- 69.9% of patients had a comprehensive care plan. This is similar to England (70.5%).
- 96.3% of eligible women in this group had a cervical smear in the previous 5 years better than the England average (94%).

Dementia prevalence

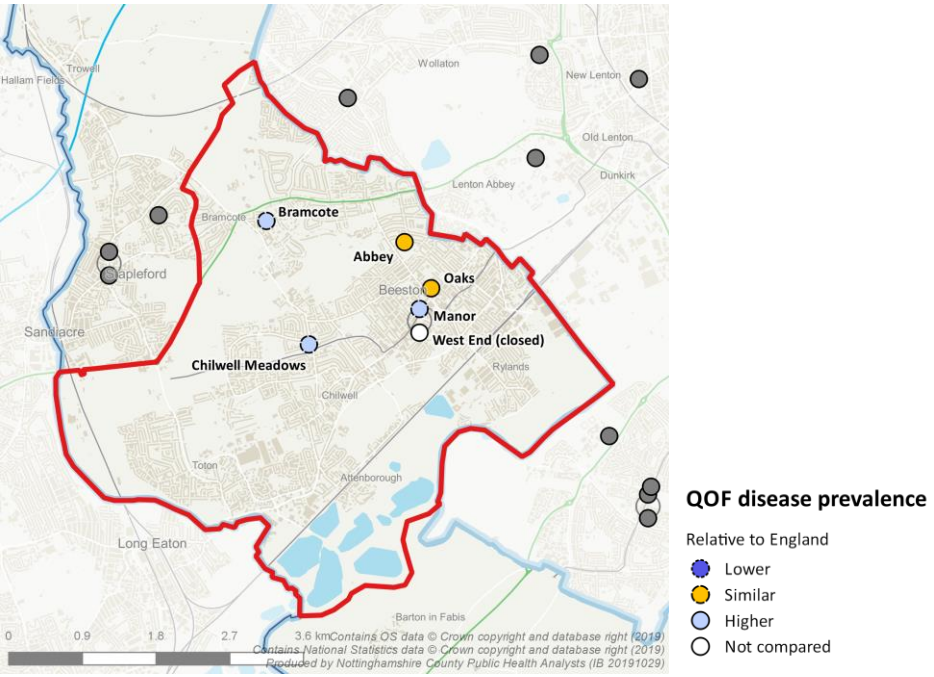

Dementia affects the brain and its abilities. This includes problems with memory loss, thinking speed, mental agility, language, understanding and judgement.

- The NHD population had a higher prevalence than England; 1.3% compared to 0.8% for England.
- 77.9% of patients had a face-to-face review in the previous 12 months. This is higher than the England average of 70.3%.
- 87.5% of patients newly diagnosed with dementia had records of key test results soon after diagnosis; similar to the England average (83.7%).

Beeston Neighbourhood

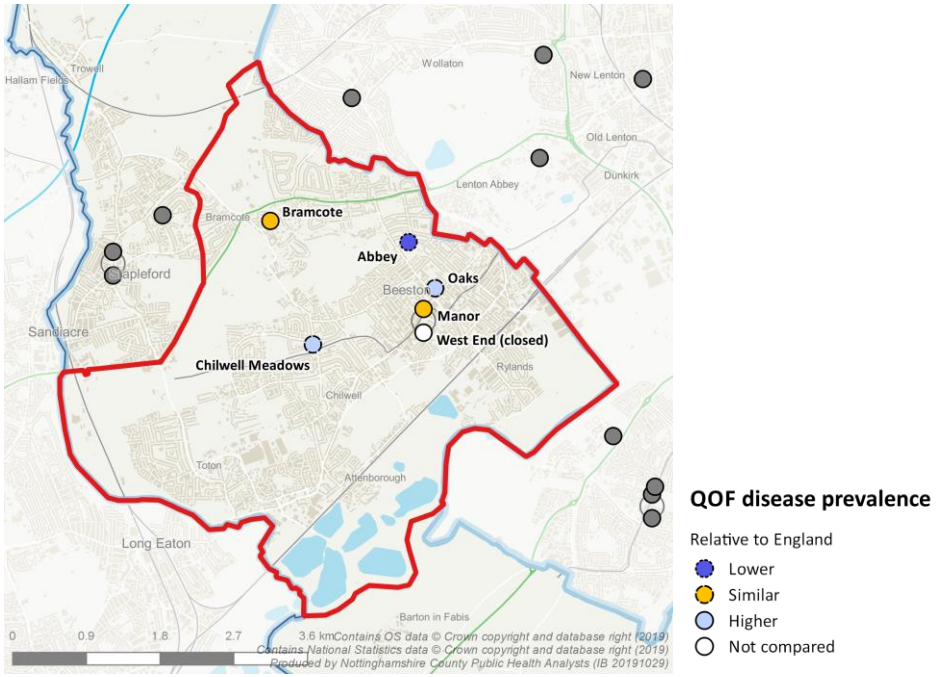

Atrial fibrillation prevalence

AF is the most common sustained cardiac arrhythmia. Men are more commonly affected than women and the prevalence increases with age. In people who have had a stroke, concurrent AF is linked with a higher rate of mortality, disability, longer hospital stay and lower rate of discharge home.

- The NHD population had a significantly higher prevalence than England; 2.4% compared with 2.0%.
- The proportion having their risk of stroke assessed (88%) was higher than the England average (82.1%).
- Anticoagulant treatment of at risk patients (86%) was higher than the England average (81.1%).

Asthma prevalence

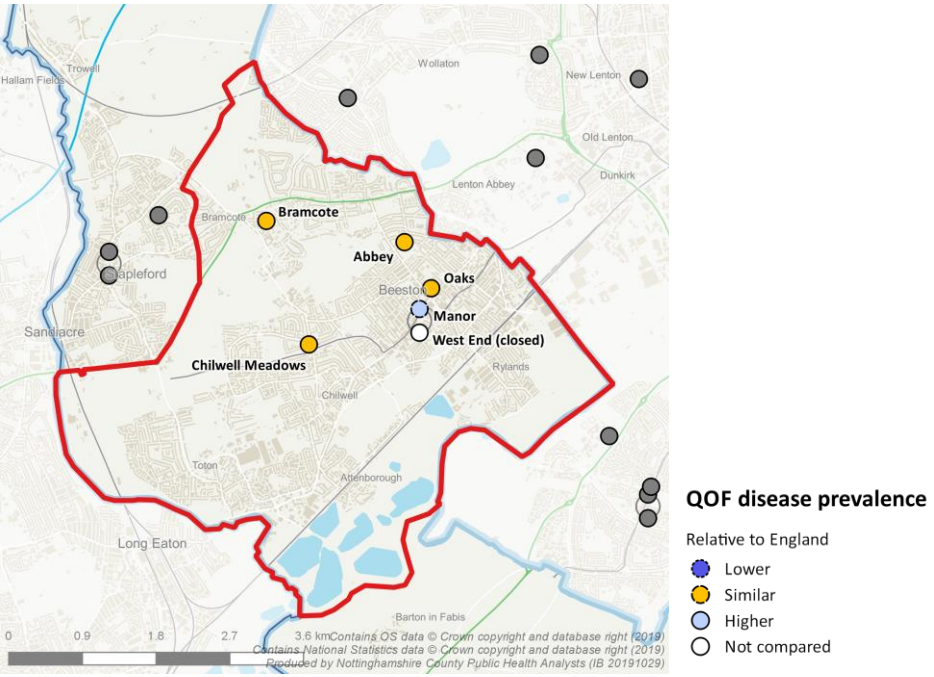

Asthma is a common respiratory condition which responds well to appropriate management and which is principally managed in primary care.

- The NHD population had a higher prevalence (6.3%) than England (6.0%).
- Recording of smoking status (age 14-19 years) was better than the England average; 86.1% compared to 78%.
- Asthma review had been carried out in 89.7% of patients; worse than the England average (91.6%).
- Recorded variability/reversibility (92.4%) was better than the England average (88.5%).

Beeston Neighbourhood

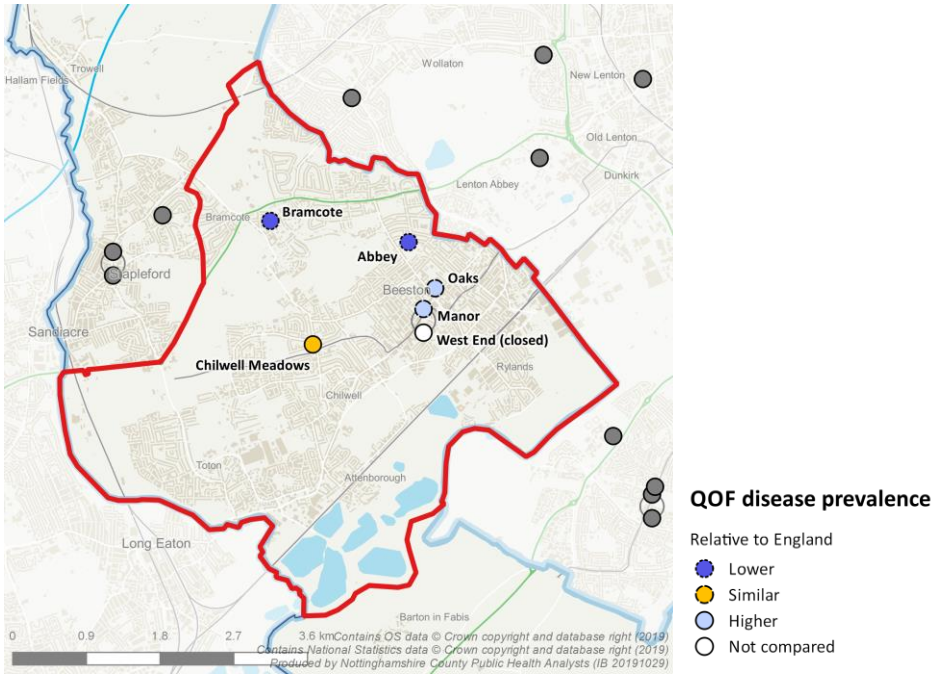

Learning disabilities prevalence

People with learning disabilities are among the most vulnerable and socially excluded in our society. Virtually all people with learning disabilities are now living in the community and depend on general practice for their primary care needs.

- The NHD population had a prevalence 0.5%; the same as the England average (0.5%).

Osteoporosis (secondary prevention) prevalence

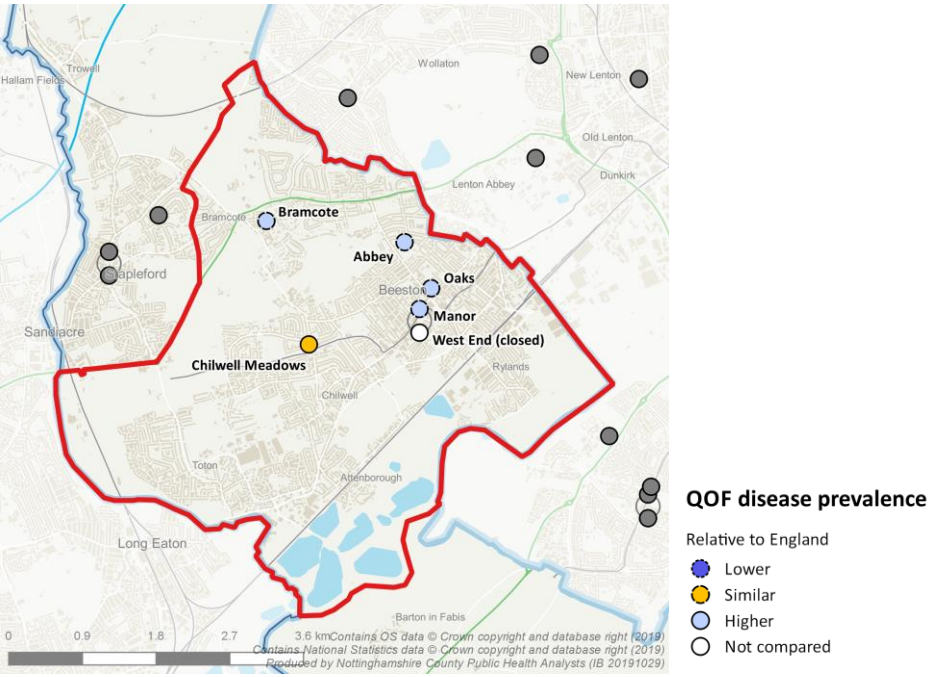

Osteoporotic fragility fractures can cause substantial pain and severe disability and are associated with decreased life expectancy. They occur most commonly in the spine, hip and wrist. They also occur in the arm, pelvis, ribs and other bones.

- The NHD population had a significantly higher prevalence (1.3%) than England (0.8%).
- The proportion of people age 50-74 treated with bone sparing agent (75.2%) was better than the England average (68.1%).
- The proportion of those treated that were age 75 or over was lower than England; 87.5% compared with 90.6%.

Beeston Neighbourhood

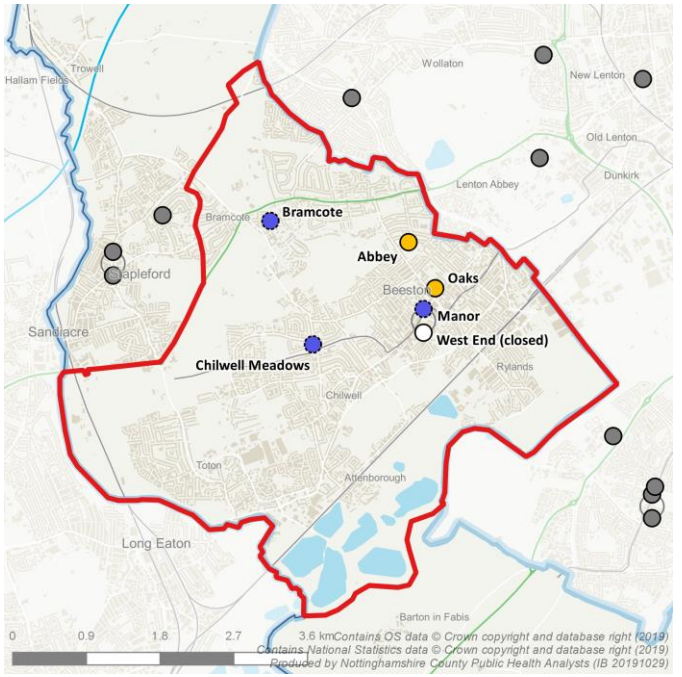

Palliative care prevalence

Palliative or end of life care is the active total care of patients with life-limiting disease and their families by a multi-professional team

- The prevalence of patients receiving palliative care is significantly higher than the England average; 0.6% compared to 0.4%.

Smoking prevalence

The percentage of patients age 15 and over with current status of smoker recorded in last 2 years. High risk smokers are those with any combination of the following conditions: CHD, PAD, stroke or TIA, hypertension, diabetes, COPD, CKD, asthma, schizophrenia, bipolar affective disorder or other psychoses whose notes record smoking status in the preceding 12 months

- The NHD population had a significantly lower smoking prevalence than England; 13.7% compared with 16.6%.
- A significantly higher proportion of high risk smokers were offered support and treatment in the last 12 months (82.4%) compared to the England average (79.7%).

Beeston Neighbourhood

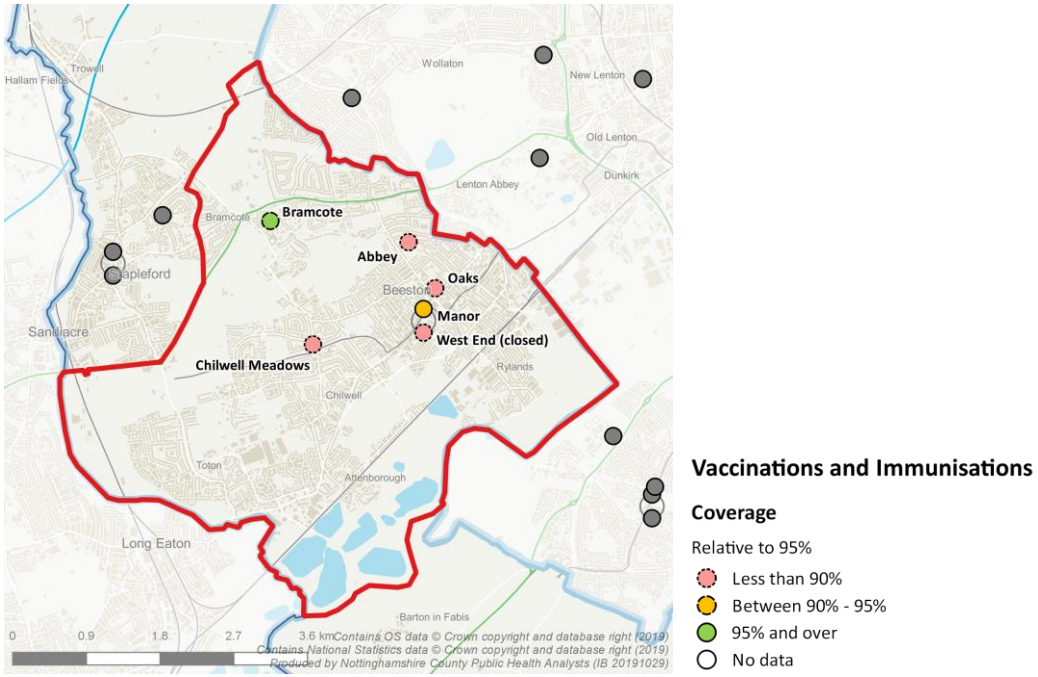

DTAP 5yrs immunisation uptake

Diphtheria is a highly contagious bacterial infection that mainly affects the nose and throat.

- The practices achieved immunisation uptake at age 5 of 87.8% during 2018/19.
- Three practices did not reach 90% coverage.

MMR uptake

MMR is a combined vaccine that protects against three separate illnesses; measles, mumps and rubella (German measles). These are highly infectious conditions that can have serious, potentially fatal, complications.

- The practices achieved 88% immunisation uptake at age 5 during 2018/19.
- Three practices did not reach 90% coverage.
